THE VIDEO

HD-E

The Electronic combined push-pull HD-E offers the driver an excellent driving experience through ergonomic acceleration and mechanical braking.

Acceleration is effortless, achieved by pressing the lever and its hand-shaped grip downward, while the braking force is proportional to the pressure applied.

Mounted on the floor, it allows for an adjustable steering column without interfering with the knee airbag.

Its carefully designed curvature provides an ergonomic led position and preserves seat adjustability for forward and backward movement.

For maximum safety, acceleration is automatically blocked as soon as the brake is activated.

FEATURES

- Includes 2 potentiometers for higher safety
- Integrate functional safety features from ISO26262
- Universal mounting bracket
- Specific mounting brackets on demand when available
- Ergonomic use
- Easy installation
- Keep the adjustment of the steering column
- Does not interfere with the knee airbag

Easy connection to the car with PATCHANA INV

TECHNICAL OVERVIEW

- Supplied with PATCHANA INV module
- Wired controller
- Easy & Quick installation
- Specific harness to the vehicle
- Programmable through MyProg
- LED which indicate the power supply of the controller and blinking in case of faulty mode
- Fault log for easy diagnostic and troubleshooting
